## **Storm Drain Stewardship**

#### What is a storm drain?

Storm drains are the metal grates found on urban and suburban

streets, often at corners and on the sides of curbs and gutters. They help prevent flooding by draining rainwater and melted snow off of streets and other paved surfaces.

# Is a Storm Drain System the same thing as a Sanitary Sewer System?

Sanitary sewer systems and storm drain systems are not the same. The water that goes down a sink or toilet in

your home or business flows through a sanitary sewer system to a wastewater treatment plant where it is treated and cleaned. Water that flows down a driveway or street and into a gutter goes into a storm drain which goes directly to a natural body of water, untreated.

### What's the problem?

While storm drains were designed to divert water from streets, they become dangerous water polluters when harmful substances from lawns and streets flow through them.

During a rainfall, water runs down streets and through yards, picking up substances along the way. This "runoff" often contains elements that pollute our waterways, can harm wildlife, and degrade water quality.

Water that enters storm drains is not cleaned at a wastewater treatment plant before it flows directly to streams, rivers and lakes.

Some common contaminants in storm water include lawn chemicals, pet waste, household chemicals like paint, and soaps used for washing cars. Products advertised as "non-toxic" or "biodegradable" are not typically safe for our waterways either — even small amounts of dirt entering storm drains can affect the water quality.

These small amounts of pollution can add up to a big problem when it comes from an area the size of a City like Marshall. Each storm drain can have harmful effects on wildlife, recreation and forestry.

### What Can You Do?

To help prevent storm water pollution follow these simple tips:

- Use lawn chemicals safely. Always follow label instructions and never apply before rain or watering the lawn, unless directed.
- **Pick up after your pets.** When walking your pet, remember to bring extra bags to pick up and dispose of waste properly.
- Recycle used oil. Never place used motor oil in the trash or pour down storm drains.
- Sweep driveways and sidewalks clean. Remove debris and residue that could end up in a storm drain from concrete and paved areas around your house.
- Wash your car the right way. Either wash your car at a car wash that filters the wastewater, or wash your car in a grassy area. Avoid washing your car on a driveway or in the street.
- **Don't dump.** Never discard trash or yard waste down storm drains or in the street.
- **Storm drain marking.** Assist the Marshall Area Conservation Committee in placing markers or painting stencils with anti-dumping messages on storm drains to remind citizens where the water flows
